

The Policyholder Advocate

August 2008

Metamorphosis

(noun) a biological process that involves an abrupt change in appearance or character. The change usually is accompanied by a change in habitat or behavior. The change can be positive or negative. The added strain of doing battle with an insurance company takes its toll on relationships, finances, health and appearance.

A how-to guide to surviving the claim.
(full story)

An aerial photograph showing a town with a river that has overflowed its banks, flooding the surrounding areas. The water is a muddy brown color, and the buildings and roads are partially submerged.

America's mid-section under water. Insurance companies won't pay for flood and FEMA told them they need not buy flood insurance. What will they do now?

A Policyholders of America publication

THE METAMORPHOSIS: HOW TO DEAL WITH FINANCIAL/PROPERTY LOSS AND THE DOMINO EFFECT THAT FOLLOWS

It's a domino effect that seemingly has no end.

The first domino to fall is the property loss. Then comes financial hardship, added stress, marital and other relationship problems. Soon, health problems arise if they hadn't already. You look and feel as if you aged 30 years in just six months.

For these reasons, POA has spent tremendous money and time investigating inexpensive but effective tools that can help people better cope with the realities of waging war with a giant insurance company. Our goal was to offer inexpensive, natural treatments that don't require prescriptions and long term commitments.

POA's president happened upon such a line in 2004, when her own physician in Austin, TX suspected some of her health problems could be resolved by some of the products POA is now offering. Her problems were, in fact, resolved and she was surprised to find out that she could order them without a doctor's prescription. It took years of further research and negotiation but POA now is making this line available to you at prices not offered to anyone else.

Sabre Sciences, one of the fastest growing endocrine testing and support laboratories in the U.S., develops and manufactures this cutting-edge and affordable line of products that naturally supplement imbalances commonly associated with aging, chronic stress and the build-up of environmental toxins and pollutants that disrupt balance.

The products offered are gender-specific and are built upon the medically accepted principle that chronic stress causes our bodies to overproduce chemical messages and electrical (neurological) impulses, disrupting our natural ability to regain balance. The chemical messengers for communicating in the body are hormones which are produced by the glands of the endocrine system. While the replacement of certain sex hormones can be unsafe, this line of products harnesses two master hormones — DHEA and pregnenolone — both of which are responsible for the natural production of the 38 other hormones often depleted because of the aging process, chronic stress and/or environmental toxins.

If the hormones produced by the endocrine system are imbalanced, the following symptoms most often occur: wrinkles and loss of facial skin tone, plummeting energy level, loss of libido (or "sex drive"), mood swings, depression, premature

aging, memory loss, sleeplessness, weight problems, digestive problems, hair loss, chronic non-specific pain, lower back pain, bloating, brittle hair and nails, cravings, addictions, problems associated with a compromised immune system, high cholesterol and high blood pressure.

The good news though is imbalances can be scientifically supplemented — safely, inexpensively and effectively.

The last thing POA does is hawk products as that's not our style. We do, however, recommend this line and have made it available at prices that are reserved for doctors. The line has been used and tested by a number of POA members and the products POA is offering work well.
